- Scalable IT Operating Model
- Scope Creep, Cost and Time overruns
- Clear, measurable metrics to calculate RoI
- IT Team Optimization: In-house Team Vs. Outsourcing
- Future IT Investments: Enhance Vs. Upgrade Vs. Replace

Business

System

A **System** is a set of processes & data that manage and integrate various functions in a **business**
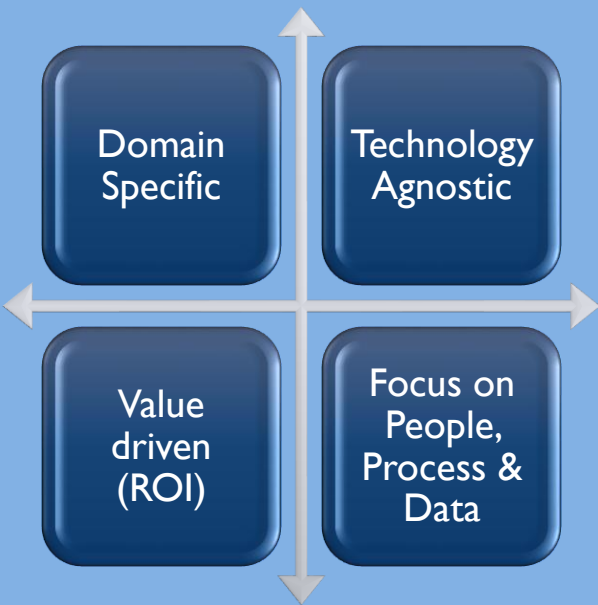

Software

**Software** is an application that enables effective implementation of the **System** through automation

Our Consulting team focuses on getting the system definition "right" leading to a successful implementation of enterprise software application. We help prepare our customers for their IT transformation journey through in-depth processes analysis, establishment of robust data governance and assessment of organizational maturity to adapt to changes brought forth by the software application.

# IT Consulting

| | |
|---|---|
| Domain Specific | Technology Agnostic |
| Value driven (ROI) | Focus on People, Process & Data |

# IT Consulting Services

## ✓ CIO On-Demand:

We help manage customer's IT strategy to align with their business vision by deploying the right tools for them to receive actionable insights and experience tangible returns

## ✓ IT Maturity Assessment :

We assess customers for process definition, measurable KPIs, data structure & governance, end-user maturity and overall readiness for IT transformation

## ✓ Application Selection :

We evaluate enterprise applications for functional, technical and budgetary fitment and help select workable solutions in line with customer's business vision and growth objectives.

## ✓ Application Health-check:

Audit customer's enterprise applications to identify potential gaps and areas of improvement with a focus on continuous improvements and enhancements.

## ✓ Security & Governance:

Help implement & maintain Information Security Standards (Audits, Trainings, Tools), help establish a GRC framework to ensure business continuity for our customers
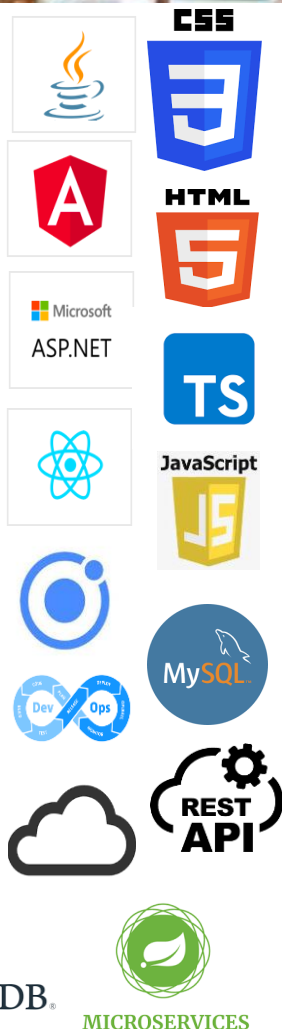

## ✓ ROI Analysis:

Help customers measure the return on investment on their transformation initiatives through clear, measurable metrics.

# Web & Mobile app Developments

## ✓ Delivery Management System

Automate dispatching | Smart routing | Increase customer loyalty | Real-time tracking | Feedback | Delivery app | Live management dashboard | Delivery Order Booking | Automated alerts | Proof of delivery |

## ✓ E-Contractor Management

Multi Level Approval | Support Planning (Work) | Easy Onboarding of Contractors | Schedule training of contractor | Train & Certify contractors | Provide access control | Tracks movement (Contractor & Tools) | Support incident reports |

## ✓ Vendor Portal

No more manual interference | Increased productivity | Time management | Auto Email notifications | Detailed report | Role based and Vendor specific data | Vendor data confidentiality maintenance |

## ✓ Order Management System

Mobile app for easy to use | Order booking – on the spot | Ease to download from play store | Increased productivity | Time management | Can view order status |

## Technology

Java Springboot,

Angular,

.net,

React,

Ionic,

DevOps,

Cloud (AWS / Azure)
