Unified SDLC Platform
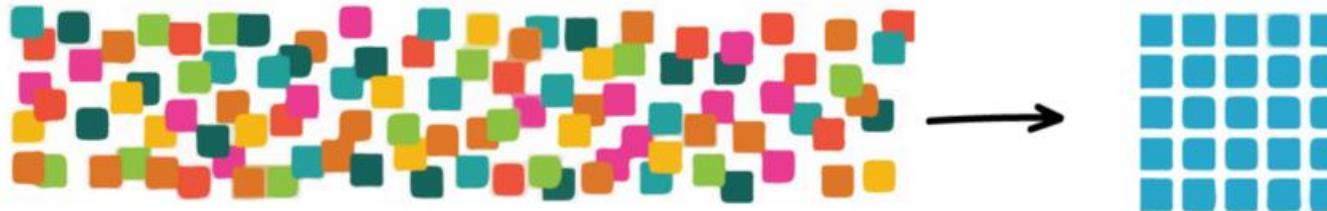

Every Role, Every Phase - One Intelligent Workspace

The Modern Engineering Challenge — and a Smarter Way Forward

Software delivery today is fast, fragmented, and heavily tool-dependent.

Teams struggle to connect business intent, design, documentation, and code in one flow.

Decisions get delayed, quality varies, and scaling adds cost instead of value.

✓ A **single workspace** to define, design, and deliver projects.

✓ Interlinked modules for documentation, data, API, and code generation.

✓ Real-time collaboration — **decisions finalized in the meeting itself**.

✓ Built-in validation ensuring **every change stays consistent**.

✓ Reusable templates and **enterprise assets for faster, reliable delivery**.

# What to do next? – Is this a big problem?

LensHub – High level features

01 CODE INFORMATION

Frontend, backend, dependency view
Extract inputs & actions

02 DATABASE INFORMATION

Table, Views, Procedure, Functions
Column, Parameters, Data types

03 CONTEXTUAL CODE SNIPPET ACCESS

Handy code stube/snippet view that is
mapped with UI or code layer

04 VISUAL REPRESENTATION - DIAGRAMS

Dependency View, Diagrams - Class, Flow,
Use Case, Mind map, Swimlane, BPM

〈 LH 〉
LensHub

**Hidden Gems
&
Outcome**

05 INPUT SCHEMA, USER ACTIONS & BEHAVIOUR

Micro requirement - input fields, events,
user actions, validations, basic wire framing

06 ACCEPTANCE & TEST DATA MANAGEMENT

NFR, Define acceptance criteria & test data
for positive & negative testing

07 COLLABORATION & PROJECT MANAGEMENT

Basic team collaboration like contextual
chat, task and release planning

08 BOILERPLAT CODE GENEREATION

Code generation as per architect and design
pattern for choice of technologies

Benefits of LensHub

- LensHub **evaluates** application **within short time** and generate reports
- **Inter dependency visuals** eliminates spending countless hours of tech team
- Easy and **advance business requirement** documentation, with **diagram and whiteboard**
- Realtime **wireframe** for your **business forms**
- **Saves more than 40% of team's time** and results into significant cost saving throughout the digital transformation journey
- Your **choice of technical decision** on modernization approach – technology, cloud etc.
- An inbuilt **application life cycle management** features to eliminate multiple systems need
- **Generates** multi layer **code** for further development
